

stainless steel panel

**m\_inox**

# Toughness is at home

M-inox is the Bitron Video doorphone panel for guaranteed maximum toughness in minimum dimensions. Made of rugged stainless steel, this panel is ideal for places such as public garages and gates where acts of vandalism are common. The time-enduring material it is made of makes it excellent also for locations in which the panel is exposed to severe weather elements.

## As impregnable like steel:

- \* weatherproof
- \* withstands aggressions, scratches and severe attempts to damage it

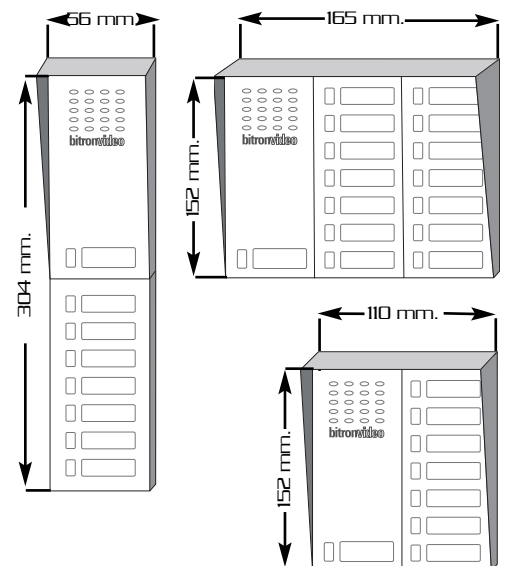

## Slim and modulatable

M-inox is the smallest panel in its class: it is 56 mm wide with a protrusion of only 23 mm. The design is slick and essential. These features make M-inox panels versatile and easily adaptable to all installation needs. Wall-mounted or partially embedded, this panel is easy to assemble and is fully modulatable: the entrance panel may be combined with other elements (with up to 7 buttons each) arranged either horizontally side-by-side or vertically to fit into the smallest of spaces.

### For all 4+n or 1+n doorphone systems

- \* Only 56 mm: can adapt to any gate column with ease
- \* Up to 16 buttons with a width of only 165 mm arranging two horizontal modules side-by-side or a height of 152 mm with three modules arranged vertically
- \* Wall-mounted or partially embedded

Frames for partially embedded mounting

# Small yet fully equipped

Bitron Video M-inox is a compact panel complete with a full array of optional features: it is small but not in want of anything. It is a genuinely tough product which fulfils many different installation needs, including stylish appearance with high audio quality.

- \* Standard protective top
- \* Blue LED backlighting for all name tags
- \* And today for partially embedded installations:

a set of frames for enhancing its toughness and providing a tidily uniform appearance.

## M-inox and T-line: kits get slimmer

The simplicity, toughness and compact size of the M-inox panel makes it ideal for house installations. And this is why the one- and two-family kits (1+n and 4+n) combine M-inox with the T-line doorphone designed by Francesco Trabucco - the other super-slim of the Bitron Video range. Style and toughness, all in one pack.

# Stainless steel panel.
